

(a)

(b)

calibration

held-out k , seen in P0held-out k , strictly unseenheld-out k (ZKsync OS matrix role)

held-out regime (validation)

limit check (descriptive)

supporting control, specified, not run

semantic anchors a4, disc ($k = 4$), a8 ($k = 8$)

FFLONK, held-out backend

FFLONK, descriptive (rank only)

"base, c": also calibrates base_zk, c_zk
